

Claim B only -- do not merge with Claim A. Matched sealed arms: PPO = CCP-S2 control; PPO+CSC = CCP-S2 treatment; PPO+CSC+SPFT = RSCFT retention treatment. All three FAIL the crossover gate. Share-Encoder PASS (Claim A) is an architectural sharing result, not evidence that SP-PPO outperformed PPO. Sources: CCP_S2_EVAL_INTEGRITY.json, RSCFT_EVAL_RESULT.json.
